

NO BASELINE, NO BOAST

One expensive workflow. One decision-grade answer.

A paid, fixed-scope diagnostic for a recurring cost, bottleneck, reconciliation, exception or stalled AI idea.

ONE WORKFLOW

NORMALLY 10 BUSINESS DAYS

PROCEED, REVISE, HOLD OR KILL

THE PROBLEM

Your best people are holding the workflow together by hand.

They reconcile records that should agree, chase approvals, move data between systems and catch exceptions after the damage is done.

WHAT TIGHTSHIP DOES

- 01 Establish the current result**
Fix the boundary, owner, evidence and economic baseline.
- 02 Trace the operating cause**
Find where the cost enters, not only where it is detected.
- 03 Compare practical fixes**
Test workflow change, controls, integration, automation, narrow AI and no project.
- 04 Make the call**
Proceed, revise, hold or kill, with the reasoning written down.

A decision before a project.

If the answer is stop, the buyer still receives the baseline, evidence and reasoning needed to avoid funding the wrong intervention.

WHAT YOU RECEIVE

A usable decision pack

- Current-state workflow and problem boundary
- Economic baseline and value hypothesis
- Evidence register with confidence ratings
- Operating-cause analysis
- Intervention options, including no project
- Recommended implementation boundary
- Control, data and adoption requirements
- Benefit measurement method
- Executive readout and decision

Commercial basis

Paid and fixed-scope. The fee is confirmed after workflow triage and before files or system access are requested. Implementation is separately approved.

A USEFUL FIT

One recurring problem, an accountable workflow owner, accessible evidence and a business able to act if the case is proven.

PRESSURE-TEST ONE WORKFLOW
